Earning, Giving and God Provision: A Biblical Perspective on Salary and Prosperity

1. Dignity of work and hard earning a salary
2. Understanding biblical prosperity
3. Principle of generosity and giving
4. Trust God provision
5. Honoring God with our firstfruits

We need to stop relying on the government to live on fix income like SSI and SSDI. Black community needs to stop being lazy in the country and support the Democrats. It is better to work to earn a living to prosper ourselves to go out and get motivated to find employment. Black community has to realize that black people had died to fight for economic opportunities during the civil rights movement. More people working and receiving job income will help reduce our deficit at the US Department of the Treasury. I am thankful to see people in the black community have jobs and earn their living daily with the American dream. If more black work at jobs today, there will be less people with mental health and living in poverty. It will be less black people living in a shared room living situation that they have to live with strangers, shared bathroom and kitchen. There will be more people able to afford to rent apartments and own a home in this country by being motivated and committed to work at jobs to earn their living daily to easily stay out of poverty to take care of themselves economically and financially.

I thank people in black community who are career focused and have jobs that stayed in school. Democrats want people to sit at home to live off the government by increasing funding for government programs like SNAP, Social security and welfare programs. We do not need to listen to people that motivate everyone to live on fixed income from the government. People with mental health and anger need to get their act together and get some professional help. Social security is insolvent by 2035. Only people who need to get social security are senior citizens that work over 30 years on the same job. If we lower taxes for small businesses and employers, employers will have capital to pay their employees healthcare that they get under Medicaid and Medicare. Democrats like Elizabeth Warren are liars when they sell stuff to their constituents that Americans get rich off Government. Americans do not get rich off the Government because it is taxpayers money from working people paid to the US Department of the Treasury. Proverbs 10:4 talks about laziness. Americans that do not want to work and rather live on fixed income are the ones that live in poverty and hate on people that are more successful than them. More people are homeless for many years because they do not really go out and apply themselves to work and get jobs. Those people rather continue to live off free services and live at homeless shelters by ruining their life with drugs and alcohol. Less and fewer taxes will increase wages in the private sector with less capital being paid for taxes to the government. When I was child, my sister and I were taught the meaning of hard work to get ahead. That is why I really do not really like shared room living situations because I have the responsibility to pay utilities and rent each month with a household. I am reliable, independent, dependable. I have experience paying utilities and household expenses because I did it in the past that paid rent I, household expenses and utilities on time out of my own pocket and bank account. Living on SSI income and SSDI is the meaning of hard work because it provides laziness for many people that causes people to have too much time on their hands daily to live off the government with Medicaid, Social security and SNAP. I have a long career focused resume with higher education, experience and

background in the private sector. There is so much lack of diligence in the black community that many of them have too much time on their hands and are getting into trouble.

The bible says honest work is honorable. It provides a good relationship and fellowship with God. We need to live with open hands and seek God's kingdom.
